

How big is China's energy storage capacity?

The country has already surpassed this initial goal,two years ahead of schedule. According to China's National Energy Administration,the country's overall capacity in the new-type energy storage sector reached 31.4 GWby the end of 2023. It increased capacity year-on-year by more than 260%,and almost 10 times since 2020.

Is energy storage a new driving force for economic growth?

The sector is becoming a "new driving force" for economic growth,attracting over 100 billion yuan (about \$13.9 billion) in investment since 2021,and driving further expansion of upstream and downstream industrial chains. This success prompted the government to raise its energy storage target by a third,to 40 GW,by 2025.

How can big data industrial parks improve energy storage business model?

Combined with the energy storage application scenarios of big data industrial parks, the collaborative modes among different entities are sorted out based on the zero-carbon target path, and the maximum economic value of the energy storage business model is brought into play through certain collaborative measures.

How China is accelerating Advanced Energy Solutions deployments?

The country has become a global force in the acceleration of advanced energy solutions deployments. Here,we showcase the particular strides China is making in energy storage and clean hydrogen. China has been the leading force in accelerating advanced energy solutions deployments like energy storage and clean hydrogen.

Will China reach 30 GW of non-hydro energy storage by 2025?

In 2021,the Chinese government set a target of 30 gigawatts (GW) of non-hydro energy storage by 2025. The country has already surpassed this initial goal,two years ahead of schedule. According to China's National Energy Administration,the country's overall capacity in the new-type energy storage sector reached 31.4 GW by the end of 2023.

Why is China investing so much in R&D?

The government there has made huge strides to enable business cases for investment by using mandates, incentives, and comprehensive energy- and industrial policy. This has driven deployments domestically, enabled exports, and created domestic supply chains. China also invests heavily in R&D.
