

## Unplug the battery and plug in the power supply to fail to boot

How do I fix a faulty laptop battery?

Turn off the laptop and unplug the adaptor to disconnect the power. If your laptop has a removable battery, remove it as well. Press and hold the power button for atleast 40 seconds. Release the power button. Reinsert the battery if you've removed it in step 2. Now reconnect the power adapter and turn on the computer. See if the issue is resolved.

What if my laptop won't turn on without a battery?

Try it without the battery. With the laptop unplugged,remove the battery. Reconnect the power cable and try turning on the computer. If the computer turns on without the battery,you'll need to buy a new laptop battery. If it still won't power on,unplug the power cord from the laptop,then hold down the power button for 5 to 30 seconds.

How do I Turn on my laptop without a battery?

Desktops: Unplug the power cord and leave it unplugged for 15 seconds. Now,reconnect the power cord and wait 5 seconds before attempting to turn on the power. Laptops with removable batteries: Unplug the power adapter,then remove the battery. With the battery removed,hold the power button down for 5 seconds.

How to fix a laptop startup problem?

This common issue can stem from various causes. The first step in fixing a laptop startup problem is to check the power supply and battery. Make sure the charger is plugged in and working. If the battery is removable,try taking it out and putting it back in. If power isn't the issue,look for signs of life when you press the power button.

Why does my laptop not start when plugged in?

If your laptop still doesn't start while on battery but starts when plugged in,the battery itself may be faulty. To fix this,you'll need to replace the battery. If you're sure it is not a battery issue,use the following solutions to fix the problem: Reset Windows default power plans. Check for a dead CMOS battery.

How do you remove a battery from a laptop?
