

What are the hazards of high resistance of battery pack

Are batteries a hazard?

Batteries can pose significant hazards, such as gas releases, fires and explosions, which can harm users and possibly damage property. This blog explores potential hazards associated with batteries, how an incident may arise, and how to mitigate risks to protect users and the environment.

What causes a battery pack to fail?

Typical failures are caused by mechanical abuse, temperature abuse, extended charging times, incompatible chargers, and substandard or defective manufacturing. Lithium-ion battery packs of any scale can off-gas when they fail. A failure of an e-mobility device containing a lithium-ion battery pack in a garage can lead to deflagration.

Are lithium ion batteries a fire hazard?

Lithium-ion (Li-ion) and lithium polymer (LiPo) batteries have been the cause of several high-profile fires and many routine fires across the nation. Let's review the hazards these batteries present in public buildings and offer best practices to protect people and property.

Are lithium-ion batteries safe?

However, the increased use of lithium-ion battery technologies does not come without risk. The potential for thermal runaway, leading to battery fires in accident or loss of control scenarios, is widely acknowledged. Lead-acid batteries also come with the risk of hydrogen off-gassing during normal operation.

What are the best practices for storing lithium-ion batteries?

Following are some best practices that, if correctly followed, will reduce the risk of fire and explosion of stored batteries. Whenever a battery is not used actively (e.g., for more than 3 days), it should be placed in the storage area to avoid being damaged and unsafe. Remove the lithium-ion battery from a device before storing it.

What happens if a lithium ion battery pack fails?

Lithium-ion battery packs of any scale can off-gas when they fail. A failure of an e-mobility device containing a lithium-ion battery pack in a garage can lead to deflagration. This low-speed explosion produces about 3 psi of pressure inside the garage.
