What is the power of a charging pile?

**Power and compatibility** The power of a charging pile refers to the maximum amount of electrical energy that can be output per hour, in kW or "kilowatts". AC charging piles are generally divided into 3.5kW, 7KW, 11kW, and 22KW specifications according to power.

What information does a charging pile display?

**Information display screen** Some charging piles are equipped with information display screens, which can display information such as voltage, current, real-time power, temperature, charging time, etc. Some can also display the working status of each phase of the three-phase charging pile.

How does a car battery charger work?

After the charging gun head is inserted into the slow charging interface of the car, the AC charging pile sends the AC power to the on-board charger, which converts the AC power into DC power and cooperates with the car battery management system (BMS) to complete the battery charging.

What is an AC charging pile?

Therefore, the AC charging pile can be understood as a set of connection and control equipment with a protection system. It implements a unified electrical protocol (national standard regulations) to communicate with the on-board charger to achieve functions such as opening and closing the scheduled charging.

How do electric vehicle charging piles work?

To shorten the charging time of users, charging piles generally use high-voltage and high-current working methods, which put forward extremely high requirements for safety. Electric vehicle charging piles can be divided into indoor and outdoor forms.

How does a 4G charging pile work?

The charging pile has a built-in 4G SIM card, and then connects to the Internet through traffic, so that users can remotely control it through APP and mini-programs, which is more convenient. The 4G version of the product that you usually see has this function, of course, the price is higher.
