

The lead acid battery may last you a month or 5 more years. If the temperature is somewhat controlled (not 0 degrees and not in the sun ) and your current draw is not more than a few amps, a lifepo4 battery will charge to about 85-95% (great for longevity) off of lead acid battery chargers and last you a decade or more with a good balancing BMS.

Everytime there is a need to expand the system, do people usually throw away all the old batteries and buy new sets? Let's say one battery fails in a 24V series setup after 2 years. ... I already have a 3 year old 160AH lead acid battery hooked up to an 1KW inverter which keeps my house powered partially during power outages which are quite ...
