How Solar Street Lights Work. The theory behind solar street lights involves several steps: Solar Energy Conversion: During daylight hours, solar panels absorb sunlight and convert it into direct current (DC) electricity. Energy Storage: The generated electricity is used to charge the battery, which stores excess energy for use after sunset.

Our solar-powered street lights have a fully automatic operation and zero local emissions. During daylight

hours solar energy is collected and stored in the batteries. In low light or night-time, ...
