

## Will putting a lead-acid battery in the seat cushion go bad

Can you put a lead-acid battery on its side?

If no sign, it'll be fine. The major fear of putting a lead-acid battery on its side is it spilling sulfuric acid onto wherever it might end up. It won't hurt the battery itself, other than if it loses acid. If you are sure no acid has leaked, then it's probably a case of "no harm; no foul" and you got lucky.

Does a sealed battery hurt a car?

It won't hurt the battery itself, other than if it loses acid. If you are sure no acid has leaked, then it's probably a case of "no harm; no foul" and you got lucky. The meaning of "sealed" is generally stating you don't open them up to check the acid level. They still have vents which allow hydrogen gas to escape as the battery is being charged.

Is a sulphuric acid battery a leak?

Sulphuric acid is pretty strong acid so you should still treat a potential leak as a leak. As mentioned, AGM batteries like Optima and a few other less well known are popular for off road where the battery can be mounted upside down or sideways. Completely sealed.

Can I put a battery under my seat?

If you are going to put it under your seat you should put it in an enclosure. You should also use a vented battery that you can vent outside of the cab. Good luck. You must log in or register to reply here.

What does it mean if a battery is sealed?

The meaning of "sealed" is generally stating you don't open them up to check the acid level. They still have vents which allow hydrogen gas to escape as the battery is being charged. Acid can still escape from the vent if the battery is put into a position where the acid can escape through the vent.

Can acid escape from a battery vent?

Acid can still escape from the vent if the battery is put into a position where the acid can escape through the vent. Depends on the battery type what bad can happen, but generally that doesn't include harm to the battery -- it includes danger of acid leaks. Sealed, maintenance-free doesn't mean anything.

If it's lead acid battery, no. Not safe. These batteries are made to work in the correct position so the plate inside are always wet with acid. Most sealed lead acid batteries have a tiny venting hole to release gas that might be produced ...

I can buy a nice leather cover to put over the seats, but the battery acid will continue to eat away at any material on top of it. ... other basic non-corrosive solution to neutralize the acid or else whoever comes into contact with it will ...

## Will putting a lead-acid battery in the seat cushion go bad

put it on a low amp charger for a couple days. ive had batteries at 3 volts go right to 15 volts at a half amp, indicating a bad battery, take over 24 hours to start pulling current and restore itself. definately doesnt always work though

Storing or servicing a lead acid battery inside a car can be dangerous. These batteries release toxic gases, like hydrogen sulfide, and can explode. Proper ventilation is ...

Know how to extend the life of a lead acid battery and what the limits are ... and deionized water. If you believe that this mixture is good for your battery, go ahead buy it and put it into your batteries. ... actually i do it. but ...

I put a \$130 H8 battery from Walmart into mine. It's an all-glass mat battery (I think) and it seems to be working well. It's been about -12 F this week and there are no problems. Tonight should be around -25 F and I expect no problems in the morning either (other than it'll be -25 F). I used VCDS to update the car regarding the new battery.

Why it is bad to put an old and new battery together is the same as why it is bad to put two batteries of different capacity together (because that's what you've got): the charge will be wrong for one, the other, or most likely both. Too little for the higher battery, too much for the lower one.

yep, somethingsomething1212 is usually the case. You want a 12v 1.2ah sealed lead acid battery, if you have a store like Battery World or Batteries Plus in your area they will definitely carry it. ie: 12V 1.2AH Sealed Lead Acid (SLA) Battery - ...

hot rodder"s generally have there battery"s inside the cabs with out any problems . it can definitely be done the right and the wrong way . the reason why i say to use a sealed battery is because when non-sealed battery"s are charging they give off hydrogen gas, and you could possibly spill acid ruining your shoes .

When deciding between AGM and lead-acid batteries for your vehicle, consider these key points. AGM batteries have higher CCA and need no maintenance while lead-acid requires regular ...

Battery acid is a corrosive substance, and if it's not kept in good condition, it can damage your car's battery. Be sure to check the level of acid in your battery on a regular basis, and top it up if necessary. If you do not have the necessary ...
