

How do light-assisted rechargeable zinc-air batteries work?

This strategy effectively combines both light and electrical energy conversion/storage mechanisms. In addition, light-assisted rechargeable zinc-air batteries can achieve photocharging with or without applied electrical bias by partially using solar energy and the acceleration of oxygen reduction/evolution reaction kinetics.

Can light-assisted battery technology improve electrochemistry performance?

However, conventional rechargeable zinc-air battery systems face many challenges associated with electrolytes and electrodes, causing inferior electrochemistry performance. The light-assisted strategy represents a novel and innovative approach to conventional zinc-air battery technology that uses only electrical energy.

Which batteries are light-assisted?

Currently, a number of battery systems have introduced light-assisted strategies, including light-assisted lithium-oxygen batteries, lithium-carbon dioxide batteries, lithium-ion batteries, sodium-ion batteries, and ZABs ...

What is the discharge capacity of a hybrid Zn metal battery?

This interhalogen electrode in a hybrid Zn metal battery system enables a discharge capacity of 612.5 mAh g⁻¹ at 0.5 A g⁻¹ and 25 °C and an average discharge voltage of 1.48 V, which translates to a calculated specific energy of 905 Wh kg⁻¹. We first studied CIRR as an independent reaction.

What is light-assisted battery technology?

The light-assisted strategy represents a novel and innovative approach to conventional zinc-air battery technology that uses only electrical energy. This strategy effectively combines both light and electrical energy conversion/storage mechanisms.

What is a rechargeable aqueous Zn-I₂ battery?

1. Introduction Rechargeable aqueous Zn-I₂ battery is receiving increasing attention due to the abundance of electroactive materials, comparatively elevated theoretical capacity (211 mAh g⁻¹), and appropriate voltage platform (0.54 V relative to standard hydrogen electrode).

In this study we have introduced Li₂O as a preloaded sacrificial agent on a LiNi_{0.8}Co_{0.1}Mn_{0.1}O₂ cathode, providing an additional Li source to offset the irreversible loss ...

Zhu Yanan combined the light conversion agent with SrAl₂O₄:Eu²⁺, Dy³⁺ through siloxane, in which the light conversion agent can absorb green light (SrAl₂O₄:Eu²⁺, Dy³⁺) and then emit red light. However, the ...

Yonghua Du National Synchrotron Light Source II, ... Proton enhanced dynamic battery chemistry for aprotic lithium-oxygen batteries. YG Zhu, Q Liu, Y Rong, H Chen, J Yang, C Jia, LJ Yu, A ...

2 battery at 1,200 mAh g⁻¹ with 100 mA g⁻¹ current. The battery was stopped at cycle 11 in either charged or discharged state for spectroscopy studies. (D) Typical charge ...

Under light assistance, the generated electrons participate in the oxygen reduction process, and the discharge voltage equals the different of redox potential of Zn²⁺/Zn and the VB potential ...

DOI: 10.1073/pnas.2310903120 Corpus ID: 257913583; Shedding light on rechargeable Na/Cl₂ battery @article{Zhu2023SheddingLO, title={Shedding light on rechargeable Na/Cl₂ battery}, ...

The main battery redox reaction involved conversion between NaCl and Cl₂ trapped in the carbon positive electrode, delivering a cyclable capacity of up to 1200 mAh g⁻¹ ...

Trick of the light: A zinc-air battery with a polytrithiophene (pTTh) photocathode delivered an output voltage of 1.78 V under illumination, which surpasses that of the Pt/C ...

Clean and efficient lithium-ion battery (LIBs) fire extinguishing agents are urgently needed for energy storage systems (ESS). In this work, a microemulsion was prepared by titration and its ...

These enable the Li-O₂ battery with Fe₂O₃/C₃N₄ to present an elevated discharge voltage of 3.13 V under illumination, higher than the equilibrium potential 2.96 V in the dark, and a charge voltage of 3.19 V, as ...

The lithium-metal battery (LMB) has been regarded as the most promising and viable future high-energy-density rechargeable battery technology due to the employment of ...
